

SASE & SSE Platform

Cloudflare One simplifies your path to secure access, threat defense, data protection, branch connectivity, point product consolidation, and Zero Trust adoption.

Converge security & networking now

- **75%** of enterprise data shifts to the cloud by 2025¹
- **60%** of all employees contributes to the remote worker market by 2024²
- **10x** more ransomware downtime from self-hosted vs. SaaS apps through 2025³

Simply and securely connect any user to any resource without VPN or MPLS backhauling

You need one programmable connectivity cloud with a built-in Zero Trust platform, L3-7 traffic firewall with DDoS protection, and Enhanced Internet traffic acceleration. Cloudflare One is a single-vendor [Secure Access Service Edge](#) (SASE) platform enabling composable on-ramps and services to be adopted in any order. Many start with our Zero Trust Security Service Edge (SSE) to reduce your attack surface, stop phishing or ransomware compromises, prevent lateral movement, and secure data in transit, at rest or in use.

The fastest path to a Zero Trust architecture

Stop implicitly trusting users with excessive access once they're on the corporate network. Use a proxy to authenticate and authorize every request into, out of, and between entities on your network that explicitly verifies identity, device posture, and business context.

Improve operational efficiency

Simplify policy management, troubleshoot issues faster, and improve the user experience — reducing up to **80%** of connectivity-related IT tickets.

Reduce cyber risk

Harness the broadest range of intelligence sources from **20%** of the Web — DNS, email, apps, APIs and more — for real-time threat insights and enforcement.

Enable your business

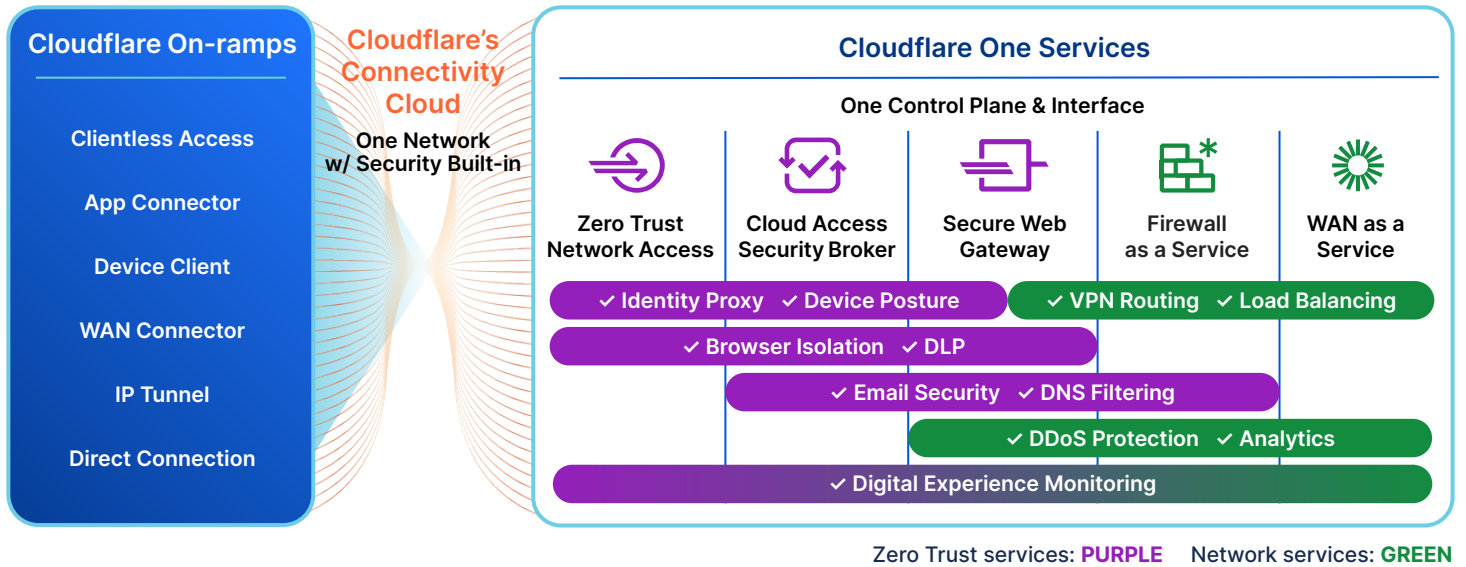

Accelerate digital maturity, reduce hardware capex, and consolidate point products with composable, in-line security services that provide holistic visibility into network traffic.

Everywhere security

All services are designed to run in **300+** cities, so all traffic is inspected closest to its source, which delivers consistent speed and scale everywhere.

How Cloudflare One works

The Cloudflare difference

- **Deployment simplicity:** Uniform and composable platform for easy setup and operations.
- **Network resiliency:** End-to-end traffic automation ensures reliable and scalable network connectivity.
- **Innovation velocity:** Our programmable network enables us to build and ship new capabilities quickly.

Integrated services beyond SASE

Cloudflare One converges security and performance capabilities not typically built into a SASE platform that further reduce complexity. For example:

- **Cloud email security:** Block email-borne threats.
- **Auth DNS, load balancing, and DDoS protection:** Our reverse proxy and network services are built into all application access controls.

Priority use cases

Secure access to...

- Replace or augment slow, risky VPNs
- Support contractor / unmanaged device access
- Streamline IT integration for M&A activity
- Migrate apps and identity stores to the cloud

Threat defense to...

- Block multi-channel phishing attacks
- Stop and mitigate ransomware attacks
- Secure Internet browsing for users and offices
- Prevent business email compromise attacks

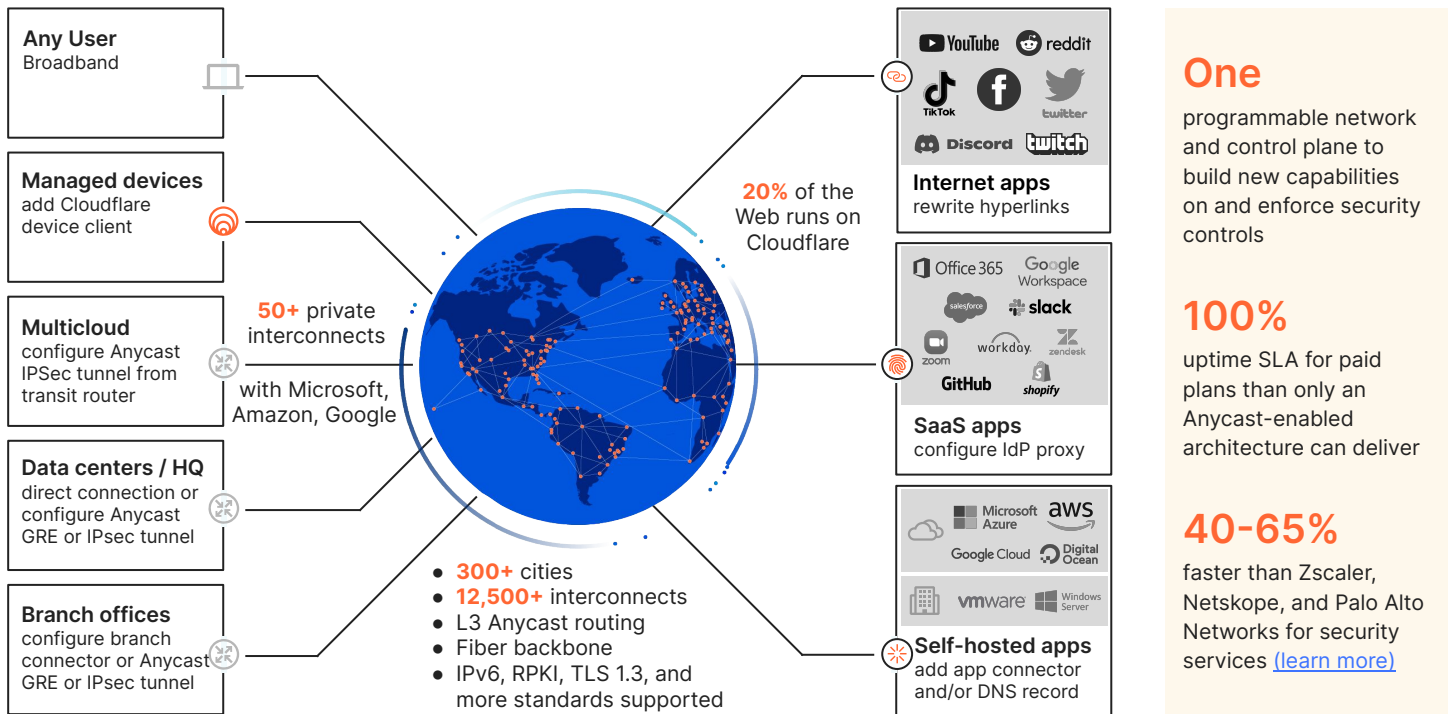

Data protection to...

- Help organizations comply with data protection and privacy regulations
- Identify and mitigate risks of exposing sensitive data across web, SaaS, and private applications
- Prevent leaks and theft of developer code

Transform WAN to...

- Streamline site-to-site connectivity across branch office locations
- Secure WAN connectivity with filters and inspections between locations and the Internet
- Simplify multi- and hybrid cloud connectivity

Flexible on-ramps to get started
