Deploy functions instantly with Workers

Run globally distributed functions for faster response times

Cloudflare Workers

Everything you need to deliver applications to your end users

Build, deploy and manage code without having to spend time and resources on maintaining backend configurations. Cloudflare Workers let you run intensive workloads and simplify complex tasks to deliver web applications that meet customers performance expectations.

Deploy code with exceptional performance and reliability

Sleep well as your code scales – effortlessly. Cloudflare manages backend configurations like auto-scaling and load balancing, so you don't pay for capacity you don't use.

Scale projects with built-in security from Cloudflare

Get the security and reliability you need with out-of-the-box tools from Cloudflare's security ecosystem. Workers offers robust security built in including WAF, SSL/TLS, DDoS protection and highly reliable DNS & CDN network.

Manage web functions on a single dashboard

Access audit logs of static historical versions of your Workers including bundled code, deployments, configuration, and bindings.

Automatically cache content closest to end users

Reduce load on an origin, or latency to the end user. Modify assets once they are returned from the cache to sign or personalize responses.

Update legacy code without service interruptions

Build custom call-back features, customize cache behavior or redirect user traffic based on country without interrupting production.

Why Developers Use Cloudflare

Build powerful applications to scale

Give your DevOps teams the flexibility for front-end development while reducing the complexity of back-end maintenance with Cloudflare Workers. Write web functions to help decrease loading and interaction latency while receiving all the benefits of security and reliability from Cloudflare's developer ecosystem.

Build and deploy full stack applications

Combine Workers and our data storage and database products to build and deploy powerful dynamic applications across Cloudflare's 275+ edge network.

Provide a better user experiences

Keep customer-facing API endpoints closest to customers and increase response times globally.

Deliver content faster to end users

Deliver your content in the right format depending on your user's device. Create redirect requests to certain URLs based on a mapped object to the request's URL.

Create personalized app experiences

Collect high-quality first-party data to access real-time user profiles and state, to deliver personalized app experiences without managing a ton of infrastructure.

Set Workers as your origin with custom domains

Replace your traditional origin servers with Workers. Set your Worker as the origin server with custom domains and leverage the power of Cloudflare's global network.

Customize and localize web content

Write Workers scripts to reroute site traffic according to user's location to deliver seamless user experiences.
