

Build, Deploy, and Run applications on Cloudflare

All the building blocks to create a full-stack application

Cloudflare Developer Platform

Scalable & reliable

The developer platform gives you a rich ecosystem of foundational technology built on open source and open standards. Architecture choices shouldn't be tied to a single vendor, when you have the freedom to choose you're freed from costly cloud bills, sys-admin challenges, and configuration hassles.

Start building the next next big thing with:

- Scalable computing to power the logic of your application.
- Store session state and/or objects in a distributed environment.
- All the primitives to build and deliver applications on the edge

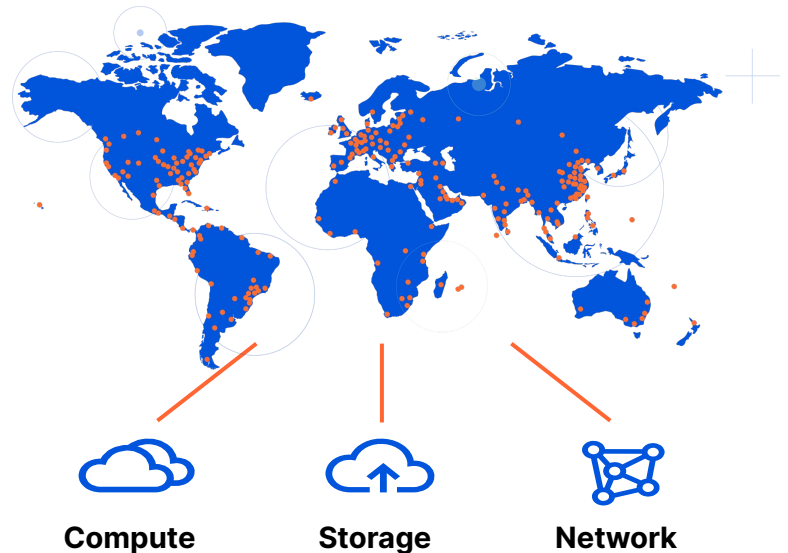

Figure 1: Building blocks to create full stack applications

Accelerate developer velocity

Improve developer productivity and skip time-consuming deployment step. Innovate faster when developers don't need to worry about configuring or maintaining infrastructure.

Drive better experiences

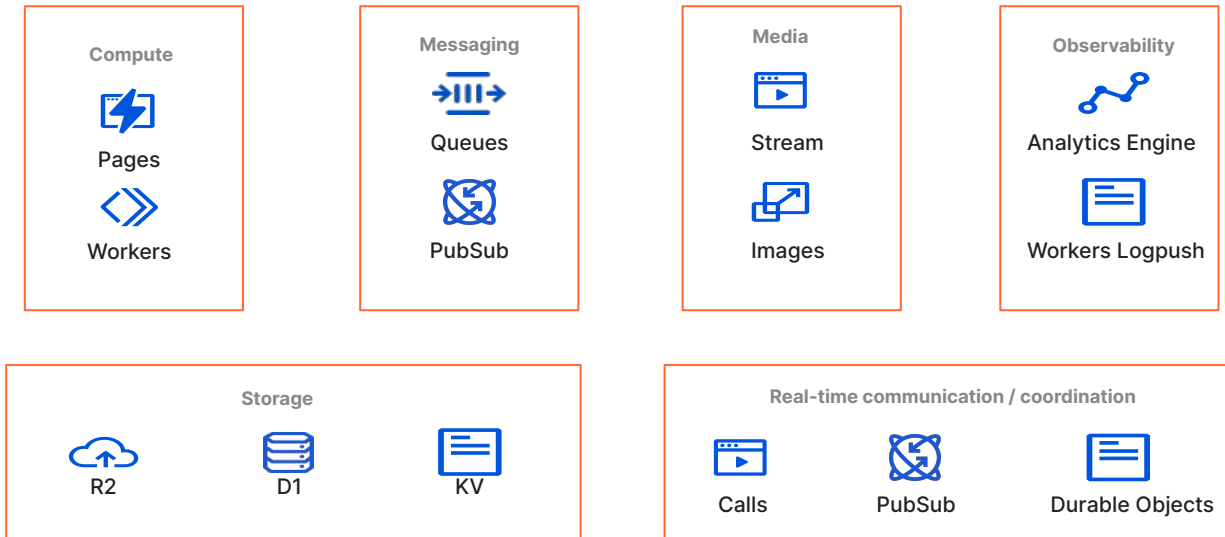

Automatically deploy code to all 285 global locations, with better application performance as it executes within approximately 50ms of 95% of the Internet-connected global population.

Build value into your business

Reduce costs with generous free tiers, transparent pricing, and no egress fees.

The Cloudflare Developer Platform

A holistic developer platform

- **Compute:** Power the logic of applications
- **Messaging:** Route and process requests
- **Storage:** Maintain session state or store assets
- **Real-time communication:** Coordinate requests and build collaborative apps
- **Media:** Embed videos and optimize images
- **Observability:** Build, debug, and troubleshoot

"Cloudflare aligns precisely with our ecommerce vision. With Cloudflare Workers, we eliminate the operational overhead of implementing and managing servers. That gives us more time to focus on the business."

Marcel Urbanek
Domain Architect, C & A
