Transforming network and security for the AI-enabled enterprise

kyndryl / CLOUDFLARE

There has been a group of related trends disrupting businesses in the AI Era: rapid adoption of multi-cloud, GPUs, SaaS, hybrid and AI-enabled workforces, and new data architectures with ML models that span data centers, clouds, and the edge. Embracing these changes has bolstered productivity, innovation, and agility, but static, hardware-centric networks fail to keep pace with the digital business, while security teams struggle to address the evolving threat landscape and expanding attack surface that AI has created.

Kyndryl and Cloudflare help you streamline multi-cloud and direct-to-Internet strategies, move towards networking and security convergence, create a consistent policy enforcement layer, and improve agility and operational efficiency through a modernized network architecture. Together, we deliver an expertly guided network transformation journey that addresses your end-to-end secure connectivity and Zero Trust vision for all future digital and AI initiatives.

Accelerate digital maturity and network transformation.

Turn your network into a universal security policy enforcement agent.

Avoid manual work across IT, network, and security teams.

Enable edge and flexible work environments for improved performance and productivity.

Eliminate technical debt and reduce spend on private network links and appliances.

Future-proof for what's to come with scalable, cloud-based managed services.

kyndryl

Kyndryl and Cloudflare are better together

CLOUDFLARE

Services to modernize and manage the mission-critical systems and services companies rely on.	Client Outcomes	An innovative solution for true transformation of networking, security, and applications.
Collaborate with experts to identify risk, close gaps, and improve security posture through network and security convergence.	Reduced Cyber Risk	Achieve global compliance, mitigate risks, and reduce attack surface up to 95% for apps, users, and threat vectors.
Kyndryl is your guide for achievable transformation across your end-to-end IT landscape.	Digital Transformation	95% of Internet users are 50ms away from the Cloudflare network which further reduces costs.
Extend network security to offices and data centers by replacing traditional WAN with flexible cloud-centric WAN.	Control Operational Costs	Reduce cost and simplify operations with a single platform and interface that can reduce TCO by up to 50%.
Embed innovation into your modernization roadmap and network architecture.	Innovation and AI	Improve app performance and reduce costs when you deploy serverless AI and full stack apps globally.

Solutions available from Kyndryl and Cloudflare

Managed WAN-as-a-Service

With the growing complexity of multi-cloud networking and increasing network workload demands, Cloudflare and Kyndryl's managed WAN-as-a-Service allows organizations to convert all their resources to cloud-native solutions. This enables them to retire expensive traditional hardware with confidence and achieve new levels of agility and innovation.

Cloudflare Zero Trust

Kyndryl's end-to-end network transformation services deliver reliable and scalable network connectivity with consistent protection from any location with Cloudflare Zero Trust. Customers can safely enable remote access with centralized management, control, and visibility into the network infrastructure.

Kyndryl Advisory Services for Network Transformation

Network and edge consulting services are built on Kyndryl Consult frameworks, reference architectures, and best practices. The network transformation journey includes strategy, assessment, planning, and design services aligned with networking and edge infrastructure needs.

About Kyndryl and Cloudflare

kyndryl

- World's largest IT infrastructure services provider
- Global customer base includes 75 of the Fortune 100
- 90,000 skilled professionals
- Operates in over 100 countries
- Newsweek's List of the Top 100 Most Loved Workplaces for 2023

CLOUDFLARE

- 20% of the web runs on Cloudflare— we see more so we protect more
- 30% of the Fortune 1000 rely on Cloudflare
- Data centers in over 310 cities
- Security at scale with 185B threats blocked daily
- 95% of world's Internet users within 50ms of our network
- Leader in 2023 IDC MarketScape: Zero Trust Network Access
