

Cloudflare's connectivity cloud

A unified platform for digital growth

Cloudflare's connectivity cloud is a unified platform of cloud-native **connectivity, security,** and **development services** powered by a programmable global network:

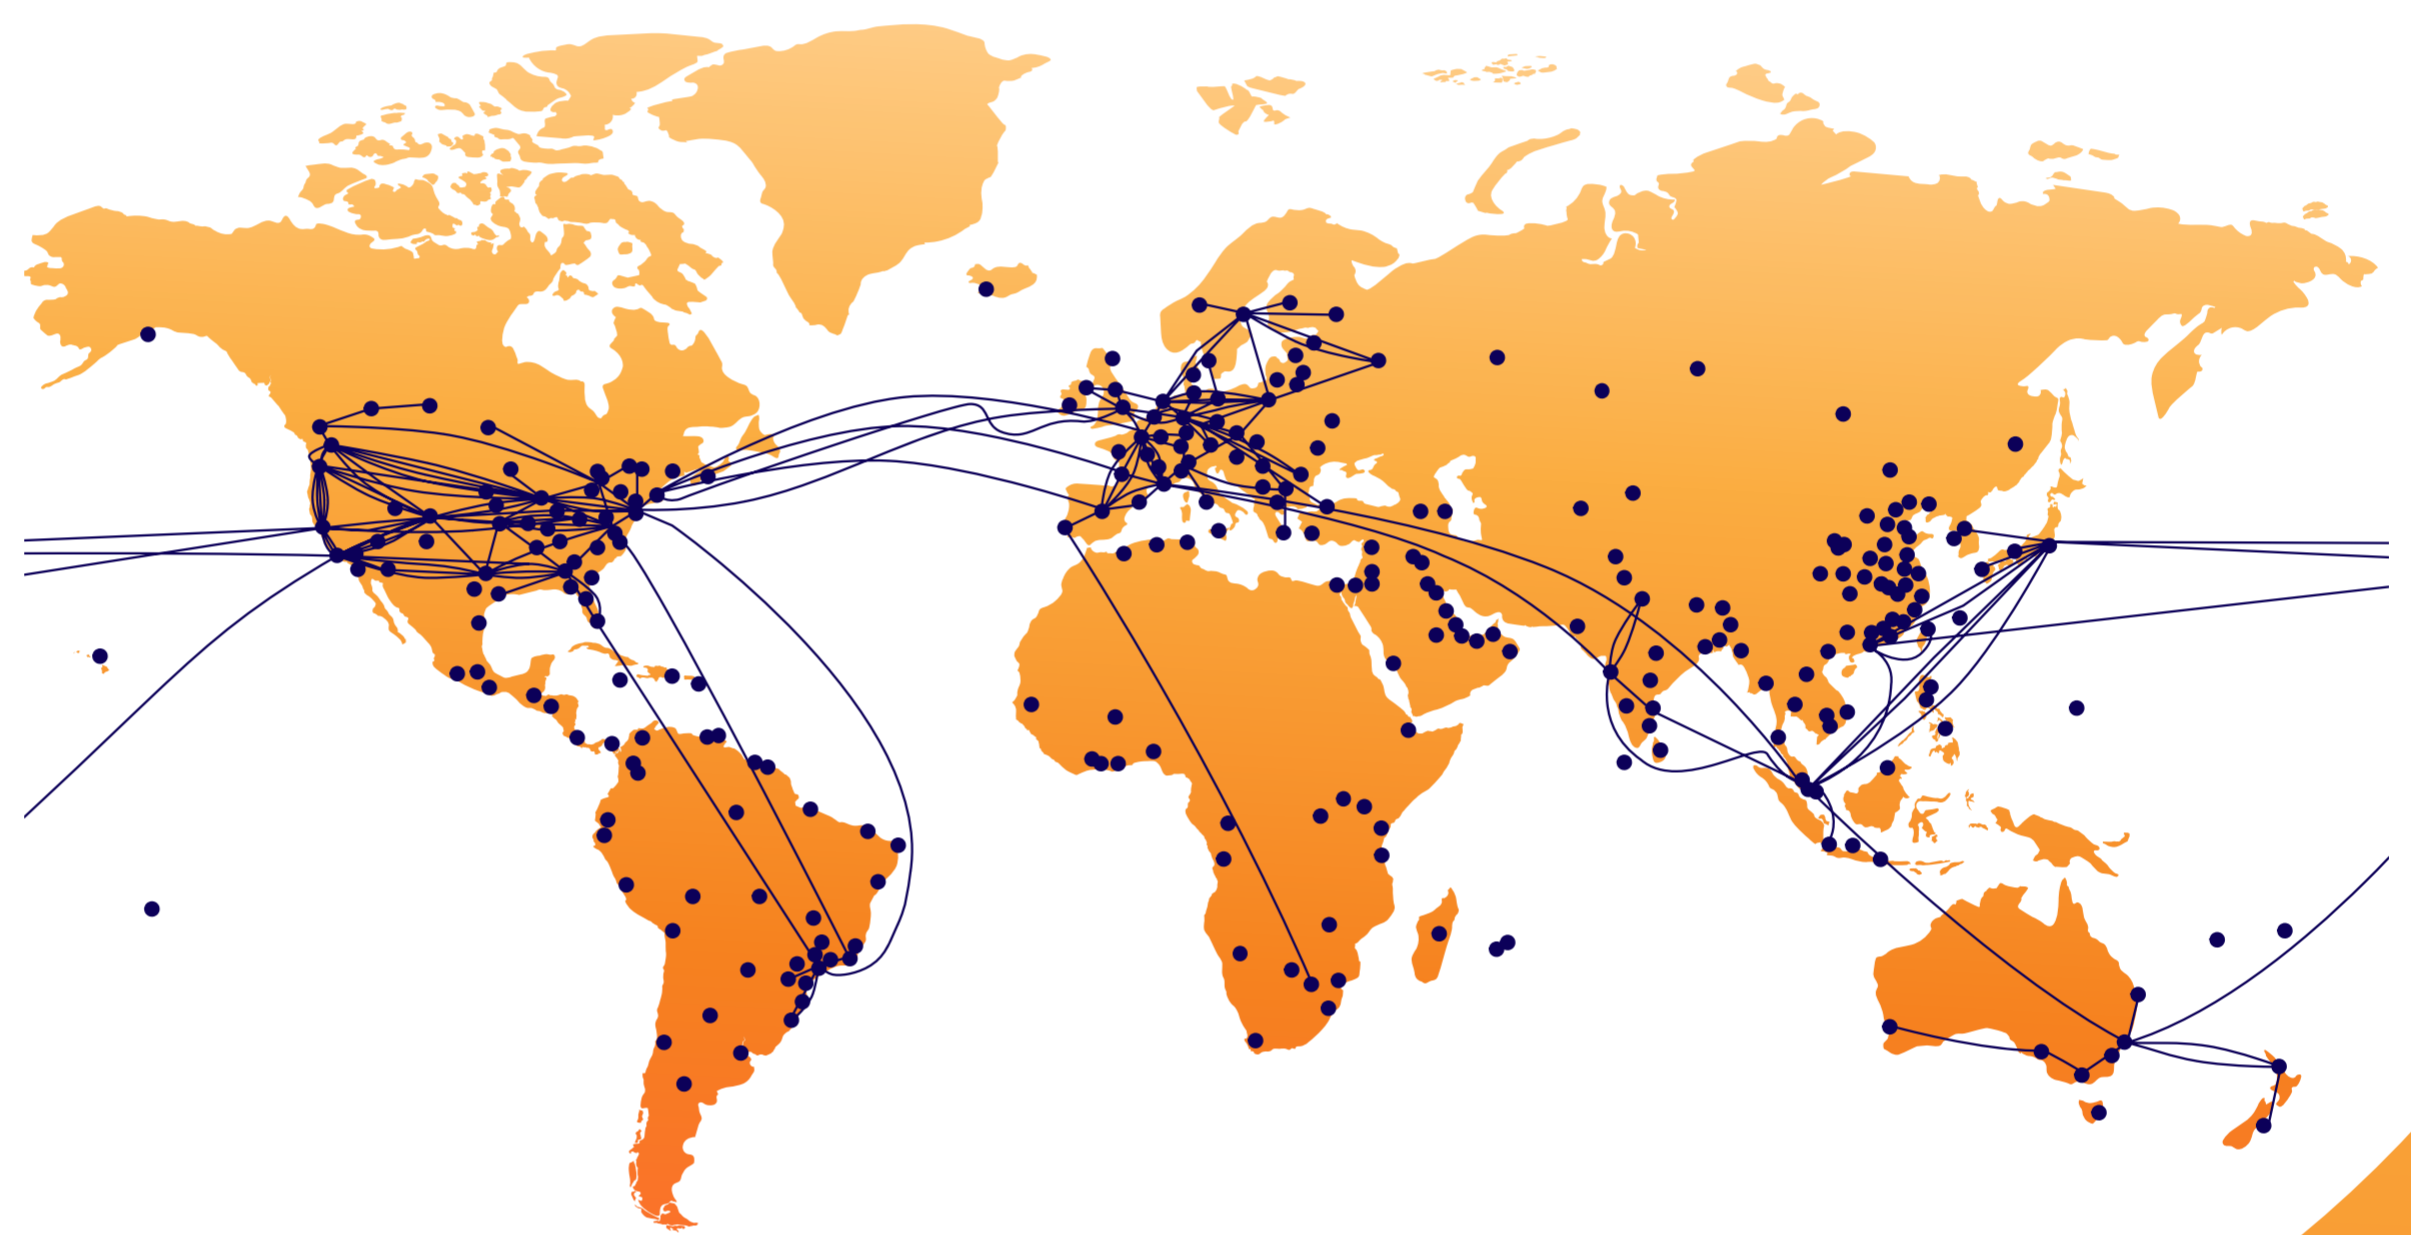

Every service in Cloudflare's connectivity cloud runs on the same powerful global network:

335+ cities
in our network

~20%
of web properties sit behind Cloudflare

227B+
cyber threats blocked per day

348 Tbps
of network capacity

Cloudflare's connectivity cloud is architected to boost agility, increase visibility, and accelerate innovation

- Unified global network:** Accelerate user experiences and block attacks close to their source with services built to run in every location.
- High resiliency:** Ensure service availability with Anycast networking and 348 Tbps of network capacity.
- Programmable services:** Customize policy enforcement, decryption, caching, and more for specific user segments and regions.
- Simplified management:** Manage every Cloudflare service via a single UI or API — and integrate log data for improved visibility.

<p>29% boost in team efficiency</p>	<p>25% breach risk reduction</p>	<p>\$1m legacy service savings</p>
--	---	---

238% ROI
\$6m NPV over three years
